

MDSS GIS Services

Mapping

- Produce both high quality and schematic maps (thematic, political, physical or other) at any scale and virtually any size.

Suitability/Capability Analysis

- Determine general plan designations based on the environmental suitability ad/or infrastructure capability of given areas; compare general plan and zoning designations to determine whether or not non-compatible designations exist.

Redistricting Services

- Prepare districts based on ethnic population, age, income, or other data and criteria.
- Redefine zones, districts, etc. on the basis of population, zoning, etc

Geographical Proximity Analysis

- Find values within a given distance.

Marketing

- Determine best places to locate businesses based on land use and demographics.

Environmental Impact Reports/Maps

- Analyze impact to environmental concerns, Important Farmlands, FEMA flood zones, etc.

Address Matching

- Locate data from client by address or Assessor's Parcel Number (APN)

Overlay Processing

- Overlay and analyze multiple zones, districts or boundaries
